

João Renner Rudge

Site Reliability Engineer and University of São Paulo Graduate

Summary

Interested in distributed systems, container orchestration, computer networking, DevOps automations, reliable and scalable system architecture, and hardware prototyping.

Some of my projects include a RTL-SDR based web radio that transmits real time tower communications from Congonhas Airport, a decentralized messaging application based on Tor and P2P communication, and a home-made server that runs my personal k8s cluster (you can read more about my projects on my github).

Work Experience

Incognia – Site Reliability Engineer

01-2026 → Present – Full time

Member of the Release & Integration team, focused in developing and improving new workflows, supporting other teams, setting up internal tools and services. Acquired experience with Kustomize, ArgoWF, ArgoCD, Kubernetes templating, AWS, IAM, Terraform.

VirtualiSurg – DevOps Engineer

01-2025 → 12-2025 – Full time

01-2024 → 12-2024 – Internship

Focused in developing Unity CI-CD workflows with GitHub Actions, automating compliance procedures, and accelerating internal development processes. Acquired experience with GitHub Actions, Bash scripting, Docker, and Kubernetes.

University of São Paulo – Penetration Tester

04-2022 → 12-2023 – Internship

Worked with the University’s IT Superintendent João Eduardo Ferreira to scan, pentest and access the security of the corporate systems of the University.

Skills

languages	Portuguese (native); English (fluent); Spanish (intermediary)
fields	Software Engineering, DevOps, Site Reliability Engineering, CI-CD
experience	Linux (filesystems, networking, architecture), server management, operating systems, container orchestration, TCP/IP networking, templating,
tools	Git, Kubernetes, Docker, GitHub Actions, Kustomize, ArgoWF, ArgoCD ...
programming	Bash, Python, C, Go, Javascript, Java ...
